

ASSIGNMENT 1

ALFIDO TECH

TASK 1=====

DATA PREPROCESSING

CODE==

Import necessary libraries

```
import pandas as pd

from sklearn.model_selection

import train_test_split from sklearn.preprocessing

import LabelEncoder, StandardScaler
```

Step 1: Create sample data

```
data = { 'Name': ['Alice', 'Bob', 'Carol', 'David', 'Eva'],
        'Age': [25, 30, None, 35, 28],
        'Salary': [50000, None, 60000, 70000, 55000],
        'Gender': ['Female', 'Male', 'Female', 'Male', 'Female'],
        'Purchased': ['Yes', 'No', 'Yes', 'No', 'Yes'] }

df = pd.DataFrame(data)

print("Initial Data:") print(df)
```

=== Step 2: Handle missing values ===

```
df['Age'].fillna(df['Age'].mean(), inplace=True) df['Salary'].fillna(df['Salary'].mean(),  
inplace=True)
```

=== Step 3: Encode categorical columns

===

```
label_enc = LabelEncoder()  
  
for col in ['Name', 'Gender', 'Purchased']:  
  
    df[col] = label_enc.fit_transform(df[col])  
  
print("\nEncoded Data:")  
  
print(df)
```

=== Step 4: Feature scaling ===

```
scaler = StandardScaler()  
  
scaled_df = pd.DataFrame(scaler.fit_transform(df), columns=df.columns)  
  
print("\nNormalized Data:")  
  
print(scaled_df)
```

=== Step 5: Split into features (X) and target (y) ===

```
X = scaled_df.drop(columns=['Purchased'])  
  
y = scaled_df['Purchased']
```

```
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, random_state=42)
```

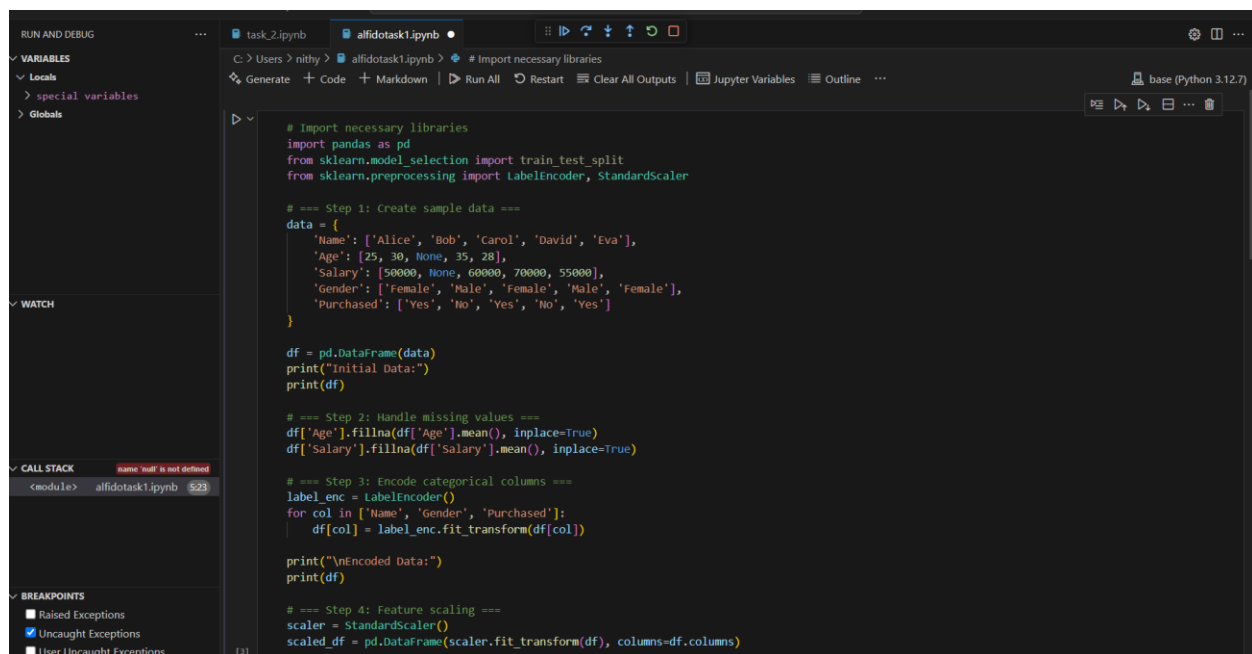

```
print("\nX_train:")
```

```
print(X_train)
```

```
print("\ny_train:")
```

```
print(y_train)
```

OUTPUT==

The screenshot shows a Jupyter Notebook interface with a dark theme. The notebook is titled 'alfidotask1.ipynb'. The left sidebar contains three panels: 'VARIABLES' (showing 'Locals', 'special variables', and 'Globals'), 'WATCH', and 'CALL STACK' (showing an error 'Name 'self' is not defined' at line 523 of 'alfidotask1.ipynb'). The 'BREAKPOINTS' panel at the bottom left has three options: 'Raised Exceptions', 'Uncaught Exceptions' (checked), and 'User Uncaught Exceptions'. The main area displays a Python script for data preprocessing. The script imports necessary libraries, creates sample data, handles missing values, encodes categorical columns, and scales features. The script is as follows:

```
# Import necessary libraries
import pandas as pd
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import LabelEncoder, StandardScaler

# --- Step 1: Create sample data ---
data = {
    'Name': ['Alice', 'Bob', 'Carol', 'David', 'Eva'],
    'Age': [25, 30, None, 35, 28],
    'Salary': [50000, None, 60000, 70000, 55000],
    'Gender': ['female', 'Male', 'female', 'Male', 'female'],
    'Purchased': ['Yes', 'No', 'Yes', 'No', 'Yes']
}

df = pd.DataFrame(data)
print("Initial Data:")
print(df)

# --- Step 2: Handle missing values ---
df['Age'].fillna(df['Age'].mean(), inplace=True)
df['Salary'].fillna(df['Salary'].mean(), inplace=True)

# --- Step 3: Encode categorical columns ---
label_enc = LabelEncoder()
for col in ['Name', 'Gender', 'Purchased']:
    df[col] = label_enc.fit_transform(df[col])

print("\nEncoded Data:")
print(df)

# --- Step 4: Feature scaling ---
scaler = StandardScaler()
scaled_df = pd.DataFrame(scaler.fit_transform(df), columns=df.columns)
```

task_2.ipynb alfidotask1.ipynb

base (Python 3.12.7)

```
# Import necessary libraries

print("\nNormalized Data:")
print(scaled_df)

=== Step 5: Split into features (X) and target (y) ===
X = scaled_df.drop(columns=['Purchased']) # Features
y = scaled_df['Purchased'] # Target

#
```

[1] ✓ 0.2s Python

Initial Data:

	Name	Age	Salary	Gender	Purchased
0	Alice	25.0	50000.0	Female	Yes
1	Bob	30.0	NaN	Male	No
2	Carol	NaN	60000.0	Female	Yes
3	David	35.0	70000.0	Male	No
4	Eva	28.0	55000.0	Female	Yes

Encoded Data:

	Name	Age	Salary	Gender	Purchased
0	0	25.0	50000.0	0	1
1	1	30.0	58750.0	1	0
2	2	29.5	60000.0	0	1
3	3	35.0	70000.0	1	0
4	4	28.0	55000.0	0	1

Normalized Data:

	Name	Age	Salary	Gender	Purchased
0	-1.414214	-1.382164	-1.322876	-0.816497	0.816497
1	-0.707107	0.153574	0.000000	1.224745	-1.224745
2	0.000000	0.000000	0.188982	-0.816497	0.816497
3	0.707107	1.689312	1.700840	1.224745	-1.224745
4	1.414214	-0.460721	-0.566947	-0.816497	0.816497
